ITS Project Office

The ITS Project Office defines, implements, and delivers information technology services and solutions in support of Humboldt State University's goals and priorities. By applying proven project management principles and a common methodology across all activities, we strive to deliver projects on time and on budget to satisfied customers and fulfill the University's strategic goals.

Here's how we do this:

- We work with project leads, managers, and teams to provide project management frameworks, reviews and support through the application of our project methodology [1] tools
- We monitor and review every state of the project management process from the initial project request form [2] to project prioritization [3] and completion [4].
- We coordinate all Common Management System [5] (CMS [6]) operations to ensure that all maintenance and update activities are handled efficiently, along with requests for access [7] to CMS and related applications.
- We collaborate with IT teams to maintain the ITS website and keep all IT-related content up-to-date and relevant to the entire HSU community.
- We ensure all members of the University community - faculty, students, staff, and alumni - are kept informed of technology projects through our continually-updated project portfolio [8] and a wide range of communications channels.
- We provide guidance in working through the project proposal process and resources [9] to help you acquire the most appropriate software [10] for your needs.
