

Humboldt State University Telecommunications & Network Services
ETHERNET ADDRESS INFORMATION

Computers require an IP address and other information to communicate on the network. This information will be supplied automatically through the DHCP server that require specific information to function. This information is necessary to activate or move/change your ethernet service. Indicate the type of service requested in the comments; A = Add, M = Move, C = Change, D = Delete. Please submit this form with the work requests for ethernet service.

Server IP addresses will be assigned by Telcom. If applicable, list previously assigned IP address, server's name, static IP requests, and/or special circumstances under the comments section. Place a check in the proper box for the VLAN information.
