

Job Title

Fisheries Biologist

Location

Sacramento, CA

Job Description

MWH's Municipal and State Services operation is seeking qualified candidates for a mid-level Fisheries Biologist position in support of the San Joaquin River Restoration Program and other MWH water resources projects in Sacramento, California. Sacramento provides MWH with an ideal location to support efforts of federal, State, regional and local water-related agencies/organizations to promote and apply water management, flood control and environmental restoration strategies, from planning to implementation throughout California.

Responsibilities of this position include the following:

- Performing technical fisheries analyses
- Resource management, mitigation planning and impact assessment
- NEPA/CEQA compliance and impact reporting
- Coordination with clients, regulatory agencies, and contractors

The MWH Sacramento office has more than 200 engineers, planners, scientists, specialists, and support staff.

Qualifications

- Bachelor's degree minimum (Master's preferred) in fisheries biology/science or related field
- 5+ years of experience assisting with project coordination
- Familiarity with California water resources and experience working with resources agencies and coordinating with contractors preferred but not necessary
- An understanding of the Endangered Species Act, and other federal, State and local requirements
- Excellent written and oral communication skills

MWH is a leader in global infrastructure development. We provide planning, engineering design, construction, procurement, program management, and technology solutions for the environmental, land, water, wastewater, energy, and power markets of the Americas, Europe, Middle East, India, Asia and the Pacific Rim.
