# EXECUTIVE SUMMARY

## PURPOSE AND SCOPE

Ascent was retained by California Polytechnic State University, Humboldt (Cal Poly Humboldt) to prepare a cultural resources technical report (CRTR) in support of the Remote Parking Project located at 2000 Foster Avenue, in Arcata, Humboldt County. The services provided included a cultural resources literature search, Sacred Lands File (SLF) search, tribal outreach and coordination, development of an Area of Potential Effect (APE), geologic archaeological sensitivity analysis, intensive pedestrian survey of the APE, and a potential impact assessment. This study was completed in compliance with Section 15064.5(a)(2)-(3) of the California Environmental Quality Act (CEQA) Guidelines and Section 106 of the National Historic Preservation Act. The presence of, or the potential for the presence of tribal cultural resources as defined by California Public Resources Code (PRC) Section 21074, is not addressed in this study.

## FINDINGS OF THE INVESTIGATION

The findings of the current investigation mirror those reported in 2016 by William Rich and Associates for the former incarnation of the student housing project. No new archaeological resources were identified as a result of the pedestrian survey. Two previously recorded sites were relocated and updated as a result of the pedestrian survey (Appendix C). The two sites have been previously evaluated and recommended not eligible for listing in the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR; Rich 2016).

The California Historical Resources Information System (CHRIS) records search indicated that two previous investigations have been conducted which cover 100 percent of the APE; an additional 14 investigations have occurred within one-half-mile (Appendix A). The CHRIS search indicated there are two previously recorded archaeological sites within the APE. The CHRIS records search identified 11 previously recorded resources within the 0.5 mile radius of the APE.

The SLF database search returned negative results for Native American resources in the APE or the immediate vicinity (Appendix B). Ascent sent project information emails to 11 tribal representatives, requesting information on the sensitivity of the APE for indigenous resources. Details of the tribal outreach and coordination can be found in Section 2.4.

## ASSESSMENT CONCLUSION AND RECOMMENDATIONS

No unique archaeological sites or historical resources were identified within the APE as a result of the background research and pedestrian survey. As such, a finding of no historic properties affected is recommended under Section 106 and a finding of no impact to historical resources is recommended under CEQA.

Analysis of the geologic archaeological data for the APE indicates there is a low possibility for the presence of archaeological resources to be present in the APE. Nevertheless, in keeping with Cal Poly Humboldt's request, the following measures are recommended:

- ▶ **Worker Awareness Training:** A cultural resources awareness training program will be provided to all construction personnel prior to the start of earth moving activities. This training will define what archaeological resources are, explain the relevant laws and policies protecting cultural resources, and what worker responsibilities are, should archaeological resources be encountered.
- ▶ **Inadvertent Discoveries:** If archaeological materials are inadvertently discovered during ground-disturbing activities, including midden soils, stone tools, chipped stone, baked clay, or concentrations of shell, bone, charcoal, glass, metal, or ceramics, all work shall cease within 100 feet (30.5 meters) of the find and the services of a professional archaeologist shall be retained immediately. At that time, Cal Poly Humboldt shall coordinate any necessary investigation of the site with the archaeologist as needed to evaluate the significance of the resource

PRC Section 5024.1 and 21083.2 and provide proper management recommendations. If the find is determined to be a unique archeological resource per 21083.2(g), contingency funding and a time allotment sufficient to allow for implementation of avoidance measures and/or mitigation will be made available. Possible management recommendations for significant resources could include resource avoidance or data recovery excavations. The contractor shall implement any measures deemed necessary by the archeologist for the protection of the cultural resources. Do not resume work in the area of the discovery until directed to do so by the archaeologist.

- ▶ Inadvertent Discovery of Human Remains: If human remains are discovered during construction activities, work within 100 feet (30.5 meters) of the remains shall be stopped immediately, and the project proponent shall notify the coroner, in accordance with Section 5097.98 of the PRC and Section 7050.5 of California's Health and Safety Code. If the remains are determined by the coroner to be Native American, the coroner will notify the Native American Heritage Commission within 24 hours, and they will designate a Most Likely Descendant (MLD). Together the land-owner and the MLD shall determine the ultimate treatment and disposition of the remains in accordance with PRC Section 5097.94.

## DISPOSITION OF DATA

This report will be filed with Cal Poly Humboldt, the Northwest Information Center (NWIC) at California State University, Sonoma, and the Ascent office in Sacramento. All field notes and other documentation related to the study are on file at the Sacramento office of Ascent.

## PERSONNEL QUALIFICATIONS

Roberto Mora has over 9 years of cultural resource management experience in throughout the western United States. He has served as the lead archaeological technician and co-field director on a variety of project types. Roberto has expertise in precontact archaeology of the Great Basin and California, human osteology, faunal remains, monitoring, survey and excavation methods, and laboratory analysis. His experience includes archaeological survey, monitoring, excavation, laboratory processing and cataloging, report writing, and data recovery of precontact and historic-era archaeological sites. Roberto meets the Secretary of the Interior's Standards for archaeology and the Caltrans Professional Qualification Standards as a principal investigator in precontact archaeology.

# 1 INTRODUCTION

Cal Poly Humboldt is proposing to construct a long-term parking lot that would provide parking spots for Cal Poly Humboldt resident students. The APE is currently vacant and is approximately 0.75-mile northwest of the Cal Poly Humboldt main campus.

Ascent conducted this CRTR in compliance with Section 106 of the National Historic Preservation Act (36 Code Federal Regulations [CFR] Section 800), CEQA Section 21083.2 of the statute, and Section 15064.5 of the CEQA Guidelines. This CRTR details the methods and results of the study, which consisted of defining an APE per 36 CFR §800.16(d), an archival review, intensive pedestrian field survey, geologic archaeological sensitivity analysis, and a potential impact assessment. The services provided included a cultural resources literature search, SLF search, tribal outreach and coordination, development of an APE, intensive pedestrian survey of the APE, and a potential impact assessment.

## 1.1 PROJECT LOCATION AND DESCRIPTION

The 18.76-acre APE is located at 2000 Foster Avenue, within the City of Arcata (Figure 1-1), approximately 0.75 mile northwest of the main campus. The APE is currently undeveloped, consisting primarily of nonnative/ornamental shrubs and ruderal vegetation. The eastern boundary of the APE contains McDaniel Slough, and drainage ditches run along the southern boundary of the APE. The APE is bordered by residential uses to the north and east, rural residential uses to the south, and agricultural land to the west. Additionally, Foster Avenue runs along the southern boundary of the APE, providing access to the site.

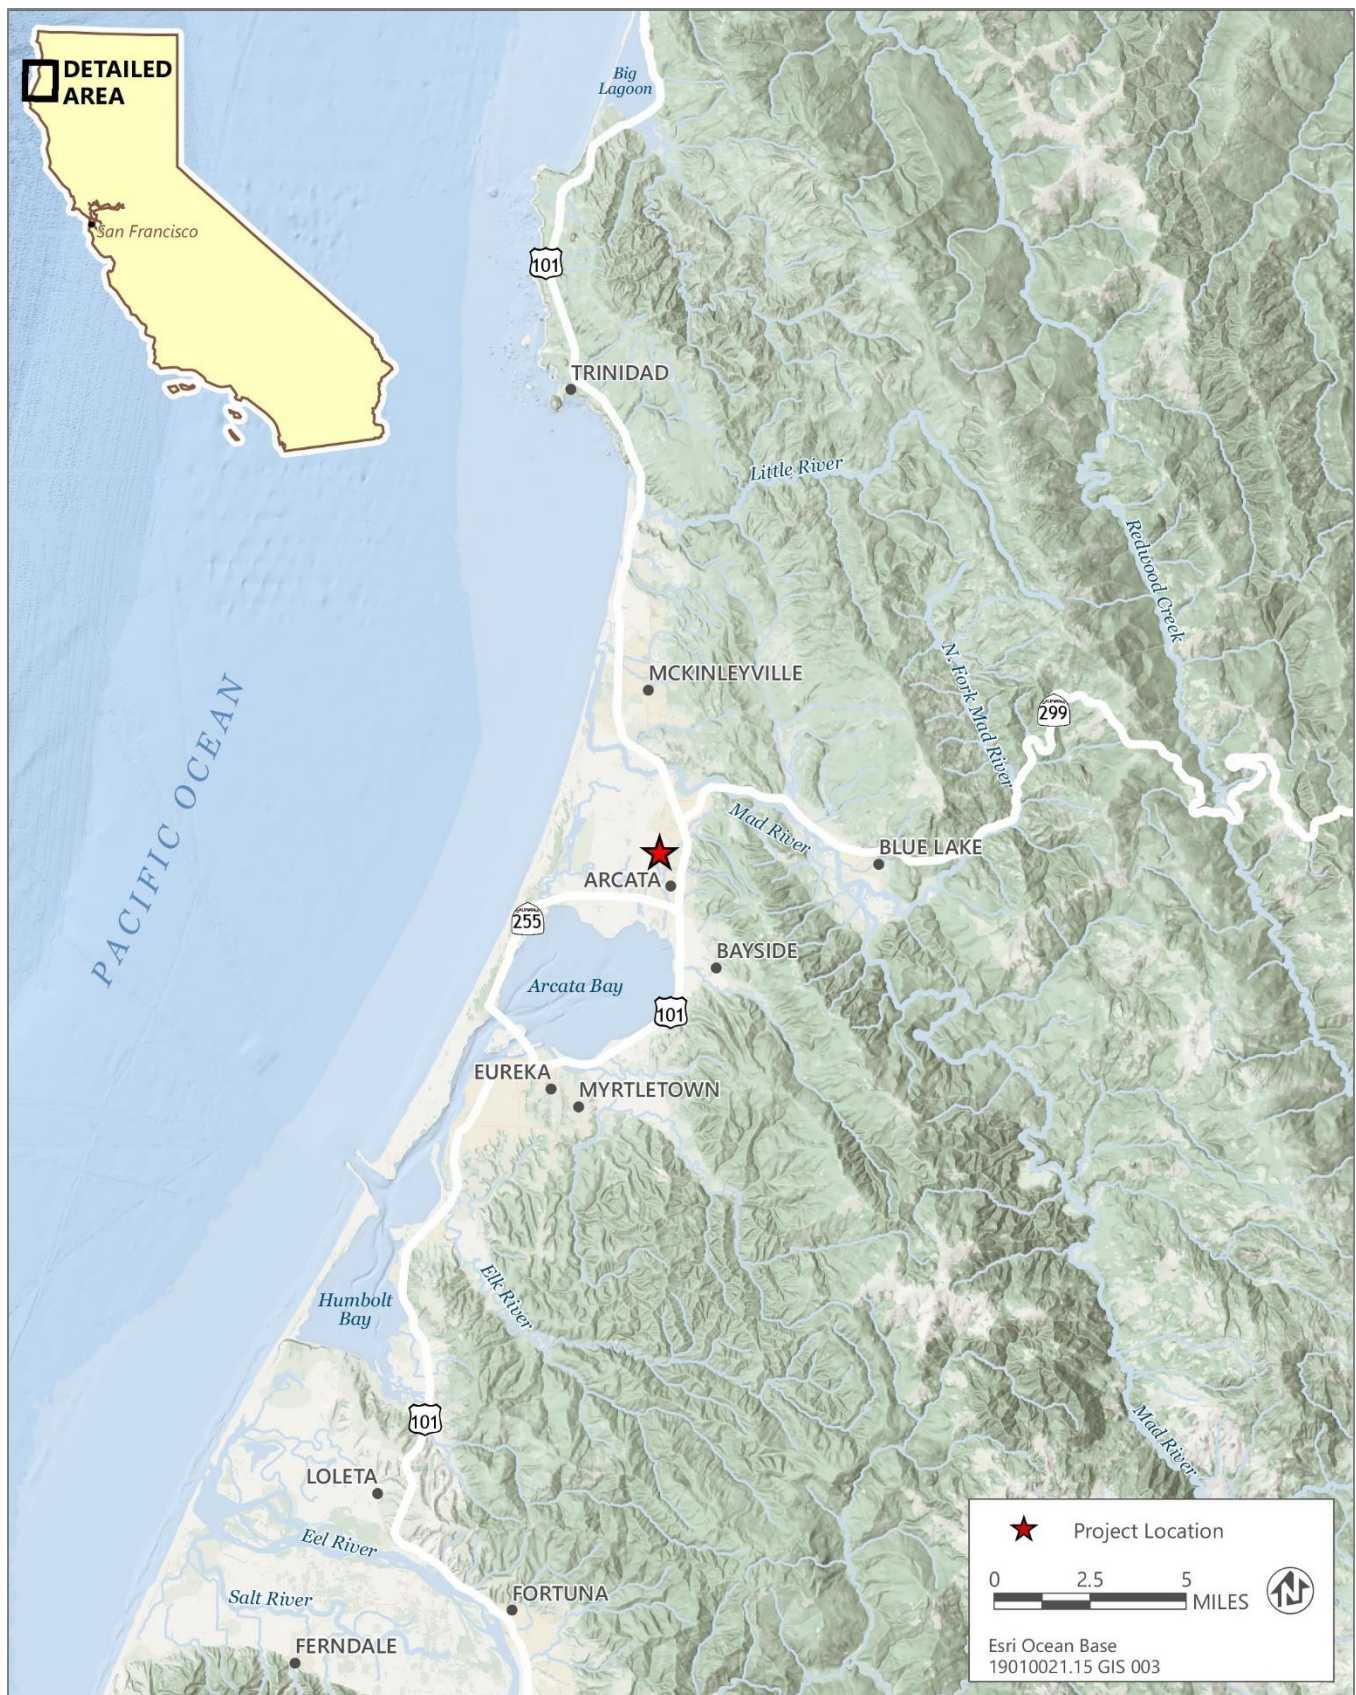

As discussed above, the project would be developed through a singular phase. Completion of the project would consist of long-term student parking and greenhouses, as depicted in Figure 2-4. A total of 999 parking stalls would be drawn within the southern approximately 11.5 acres of the site. A 60-foot-wide strip, approximately 0.6-acre of the site, would be located within the northern portion of the parking area and would be reserved for future greenhouse use. The remaining northernmost acre of the site would contain a soil stockpile that would have a maximum height of six feet and 4:1 side slopes. The soil stockpile would contain a volume of approximately 10,000 – 12,000 cubic yards of material, while the remaining soil would be hauled off site.

Of the total 999 parking stalls, 23 parking stalls would be designated for people meeting Americans with Disabilities Act (ADA) requirements and 50 would be equipped with electric vehicle (EV) charging stations. All ADA, EV, and EV capable parking stalls would be located in the southernmost and western border of the APE, separated from the remaining 779 standard parking stalls, by a proposed shuttle station. A shuttle would transport students between the parking lot and campus Monday through Friday from 7am to 6pm every 30 minutes. Shuttle services would not be offered after 6pm on weekdays. During the weekends, Saturday through Sunday, shuttle service would be dependent on campus events and would not offer regular service.

To accommodate access to the parking lot, the existing driveways to the site along Foster Avenue would be widened and paved. In addition, a bridge would be constructed and developed over McDaniel Slough, in the southeastern portion of the APE, connecting the Alliance Road and Foster Avenue to the section of Foster Avenue that runs adjacent to the APE. The Foster Avenue connection would include a "T" type intersection at the intersection of Foster Avenue and Q Street. The road connection would be designed with two travel lanes, bike lanes, and sidewalks. The proposed road connection would be located within the Foster Avenue public right-of-way and on parcels.

## 1.2 AREA OF POTENTIAL EFFECT

The area of potential effect (APE) for the project encompasses 18.76 acres. The APE also includes all areas identified as Waters of the United States. The majority of the lands in the APE would be subject to ground disturbing actions. However, open space areas would be subject to grading and other minor ground disturbing actions. Therefore, the horizontal extent extend is the entirety of the APE. The vertical extend is not anticipated to extend beyond five feet deep for the grading of the APE.

## 1.3 REGULATORY CONTEXT

### 1.3.1 Federal

#### NATIONAL HISTORIC PRESERVATION ACT

Historic properties are protected through the National Historic Preservation Act (NHPA) of 1966 (54 US Code [USC] 470f) and its implementing regulations (16 USC 470 et seq., 36 CFR 800, 36 CFR 60, and 36 CFR 63). The NHPA establishes the federal government's policy on historic preservation and the programs, including the NRHP, through which that policy is implemented. Under the NHPA, historic properties include "any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the National Register of Historic Places" (16 USC 470w (5)).

The formal criteria (36 CFR 60.4) for determining NRHP eligibility are as follows:

- 1) The property is at least 50 years old (however, properties under 50 years of age that are of exceptional importance or are contributors to a district can also be included in the NRHP);
- 2) It retains integrity of location, design, setting, materials, workmanship, feeling, and associations; and
- 3) It possesses at least one of the following characteristics:
  - Criterion A Is associated with events that have made a significant contribution to the broad patterns of history (events).
  - Criterion B Is associated with the lives of persons significant in the past (persons).
  - Criterion C Embodies the distinctive characteristics of a type, period, or method of construction, or represents the work of a master, or possesses high artistic values, or represents a significant, distinguishable entity whose components may lack individual distinction (architecture).
  - Criterion D Has yielded, or may be likely to yield, information important in prehistory or history (information potential).

For a property to retain and convey historic integrity it must possess most of the seven aspects of integrity: location, design, setting, materials, workmanship, feeling, and association. Location is the place where the historic property was constructed or the place where a historic event occurred. Integrity of location refers to whether the property has been moved since its construction. Design is the combination of elements that create the form, plan, space, structure, and style of a property. Setting is the physical environment of a historic property that illustrates the character of the place. Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property. Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. This is an intangible quality evoked by physical features that reflect a sense of a past time and place. Association is the direct link between the important historic event or person and a historic property. Continuation of historic use and occupation help maintain integrity of association.

#### NATIONAL HISTORIC PRESERVATION ACT SECTION 106

Section 106 of the NHPA requires that federal agencies and entities that they fund or license consider the effects of their actions on properties that are listed in the NRHP or that may be eligible for such listing. To determine whether an undertaking could affect NRHP-eligible properties, cultural resources, including historical and architectural properties, must be inventoried and evaluated. Although compliance with Section 106 is the responsibility of the lead federal agency, others can conduct the work necessary to comply.

The Section 106 review process consists of the following four steps:

- 1) Initiate the Section 106 process by establishing the undertaking, developing a plan for public involvement, and identifying other consulting parties.
- 2) Identify historic properties (resources that are eligible for inclusion in the NRHP) by determining the scope of efforts, identifying cultural resources in the area potentially affected by the project, and evaluating resources' eligibility for NRHP inclusion.
- 3) Assess adverse effects by applying the Section 106 criteria of adverse effect to identified historic properties.
- 4) Resolve adverse effects by consulting with the State Historic Preservation Officer and other consulting agencies, including the Advisory Council on Historic Preservation if necessary, to develop an agreement that addresses the treatment of historic properties.

## 1.3.2 State

### CALIFORNIA REGISTER OF HISTORICAL RESOURCES

All properties in California that are listed in or formally determined eligible for listing in the NRHP are eligible for listing in the CRHR. The CRHR is a listing of State of California resources that are significant in the context of California's history. It is a Statewide program with a scope and with criteria for inclusion similar to those used for the NRHP. In addition, properties designated under municipal, or county ordinances are also eligible for listing in the CRHR.

A historic resource must be significant at the local, state, or national level under one or more of the criteria defined in the California Code of Regulations Title 15, Chapter 11.5, Section 4850 to be included in the CRHR. The CRHR criteria are tied to CEQA because any resource that meets the criteria below is considered a significant historical resource under CEQA. As noted above, all resources listed in or formally determined eligible for listing in the NRHP are automatically listed in the CRHR.

The CRHR uses four evaluation criteria for significance:

- Criterion 1. Is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States.
- Criterion 2. Is associated with the lives of persons important to local, California, or national history.
- Criterion 3. Embodies the distinctive characteristics of a type, period, region, or method of construction; represents the work of a master; or possesses high artistic values.
- Criterion 4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

A property must have both significance and integrity to be considered eligible for listing in the CRHR. Loss of integrity, if sufficiently great, will overwhelm the historical significance of a resource and render it ineligible. Likewise, a resource can have complete integrity, but if it lacks significance, it must also be considered ineligible. Integrity is evaluated by regarding the property's retention of its location, design, setting, workmanship, materials, feeling, and association to its period of significance. These seven factors can be roughly grouped into three types of integrity considerations. Location and setting relate to the relationship between the property and its environment. Design, materials, and workmanship, as they apply to historic buildings, relate to construction methods and architectural details. Feeling and association are the least objective of the seven factors and pertain to the overall ability of the property to convey a sense of the historical time and place in which it was constructed.

## CALIFORNIA ENVIRONMENTAL QUALITY ACT

CEQA requires public agencies to consider the effects of their actions on “historical resources,” and “unique archaeological resources.” Pursuant to PRC Section 21084.1, a “project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.” Section 21083.2 requires agencies to determine whether projects would have effects on unique archaeological resources.

### Historical Resources

“Historical resource” is a term with a defined statutory meaning (PRC Section 21084.1; State CEQA Guidelines Sections 15064.5[a] and [b]). Under State CEQA Guidelines Section 15064.5(a), historical resources include the following:

- 1) A resource listed in or determined to be eligible by the State Historical Resources Commission for listing in, the CRHR (PRC Section 5024.1).
- 2) A resource included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g), will be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
- 3) Any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency’s determination is supported by substantial evidence in light of the whole record. Generally, a resource will be considered by the lead agency to be historically significant if the resource meets the criteria for listing in the CRHR (PRC Section 5024.1).
- 4) The fact that a resource is not listed in or determined to be eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to PRC Section 5020.1[k]) or identified in a historical resources survey (meeting the criteria in PRC Section 5024.1[g]) does not preclude a lead agency from determining that the resource may be a historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

### Unique Archaeological Resources

CEQA also requires lead agencies to consider whether projects will affect unique archaeological resources. PRC Section 21083.2(g) states that “unique archaeological resource” means an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets one or more of the following criteria:

- 1) Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
- 2) Has a special and particular quality such as being the oldest of its type or the best available example of its type.
- 3) Is directly associated with a scientifically recognized important prehistoric or historic event or person.

### Mitigation of Impacts to Archaeological Resources

Treatment options under PRC Section 21083.2 (b) to mitigate impacts to archaeological resources include activities that preserve such resources in place in an undisturbed state. PRC Section 21083.2 states:

- (a) As part of the determination made pursuant to Section 21080.1, the lead agency shall determine whether the project may have a significant effect on archaeological resources. If the lead agency determines that the project may have a significant effect on unique archaeological resources, the environmental impact report shall address the issue of those resources. An environmental impact report, if otherwise necessary, shall not address the issue of nonunique archaeological resources. A negative declaration shall be issued with respect to a project if, but for the issue of nonunique archaeological resources, the negative declaration would be otherwise issued.

- (b) If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. Examples of that treatment, in no order of preference, may include, but are not limited to, any of the following:
  - 1) Planning construction to avoid archaeological sites.
  - 2) Deeding archaeological sites into permanent conservation easements.
  - 3) Capping or covering archaeological sites with a layer of soil before building on the sites.
  - 4) Planning parks, greenspace, or other open space to incorporate archaeological sites.
- (c) To the extent that unique archaeological resources are not preserved in place or not left in an undisturbed state, mitigation measures shall be required as provided in this subdivision.
- (d) Excavation as mitigation shall be restricted to those parts of the unique archaeological resource that would be damaged or destroyed by the project.

## CALIFORNIA NATIVE AMERICAN HISTORICAL, CULTURAL, AND SACRED SITES ACT

The California Native American Historical, Cultural, and Sacred Sites Act (PRC Section 5097.9) applies to both State and private lands. The act requires, upon discovery of human remains, that construction or excavation activity cease and that the county coroner be notified. If the remains are those of a Native American, the coroner must notify the Native American Heritage Commission (NAHC), which notifies (and has the authority to designate) the most likely descendants of the deceased. The act stipulates the procedures the descendants may follow for treating or disposing of the remains and associated grave goods.

## HEALTH AND SAFETY CODE, SECTION 7050

Section 7050.5 of the Health and Safety Code requires that construction or excavation be stopped in the vicinity of discovered human remains until the coroner can determine whether the remains are those of a Native American. If they are determined to be those of a Native American, the coroner must contact NAHC.

## PUBLIC RESOURCE CODE SECTION 5097

PRC Section 5097 specifies the procedures to be followed in the event of the unexpected discovery of human remains on nonfederal land. The disposition of Native American human burials falls within the jurisdiction of the NAHC. Section 5097.5 of the Code states the following:

No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor.

### 1.3.3 Local

Cal Poly Humboldt is an entity of the California State University (CSU), which is a statutorily and legislatively created, constitutionally authorized State agency, and the APE is owned by the CSU. As explained in the "California State University Autonomy" section in Chapter 3 of this EIR, State agencies are not subject to local government planning and land use plans, policies, or regulations. Nevertheless, in the exercise of its discretion, Cal Poly Humboldt does reference, describe, and address local plans, policies, and regulations where appropriate and for informational purposes. This evaluation is also intended to be used by local agencies for determining, as part of their permit processes, the project's consistency with local plans, policies, and regulations.

## CITY OF ARCATA GENERAL PLAN

The Historical Preservation Element of the Arcata General Plan contains the following policies that are relevant to the project:

- ▶ Policy H-1b: Local Historic Landmarks Designations. Structures or sites having special character or special historic, architectural, or aesthetic interest or value shall be designated as local Historic Landmarks. Such structures or sites shall be protected from demolition and inappropriate alterations. Locally designated Historic Landmarks are shown in Figure HP-a and are listed in Table HP-1, at the end of the Element. An updated inventory of structures and sites eligible for designation as a Local Historic Landmark shall be maintained by the City. One or more of the following criteria shall be required for a structure or site to be eligible for listing:
  1. The building or site is particularly representative of a distinct architectural period, type, style, or way of life.
  2. The building is of a type or style which was once common but is now rare.
  3. The building is at least 50 years old.
  4. The building or site is connected with a person or event important to local history.
  5. The architect or builder is famous or well-recognized.
  6. The building's style, construction method, or materials are unusual or significant.
  7. The overall effect of the design or building details are beautiful or unusual.
  8. The building contains original materials or workmanship of high or unusual value.
- ▶ Policy H-7a: Cultural Resources Project Review. As part of the environmental and project review process, the City of Arcata shall enter into a Memorandum of Agreement (MOA) with the Northwest Information Center of the Historical Resources Information System of the State of California. Under the MOA, all proposed discretionary projects under the California Environmental Quality Act shall be subject to cultural resources sensitivity review by the Northwest Information Center. In order to provide a context for city projects, for the evaluation of cultural significance and for the interpretation of the results of cultural resources project reviews, the City of Arcata shall contract for a general prehistoric, ethnographic, and historic overview of the city and its environs.
- ▶ Policy H-7b: Archaeological Surface Reconnaissance. If the cultural resources project review determines that the project is located in an area with a high probability of archaeological resources, an archaeological survey by a professional archaeologist or other qualified expert shall be performed.
- ▶ Policy H-7c: Mitigation of Potential Impacts on Archeological Resources. If the results of the surface reconnaissance show that the project area contains a resource of cultural significance, and if it is demonstrated that a project will cause damage to such a resource, the City may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. Examples of other treatment include, but are not limited to, the following: 1. Modifying the project to avoid portions of the site with archaeological resources. 2. Providing or conveying easements or other deed restrictions. 3. Capping or covering archaeological resources with a soil layer before construction. 4. Planning open space to incorporate archaeological sites.
- ▶ Policy H-7d: Monitoring of Construction. In appropriate circumstances, when archaeological resources are likely to be present at a construction site, monitoring of excavation and other soil disturbing activities by archeological and/or Native American observers shall be required.
- ▶ Policy H-7f: Discovery of Archeological Resources. Upon discovery of archeological or paleontological materials, all grading or other land-disturbing construction activities at the site shall be suspended until the nature of the cultural resources has been ascertained and the appropriate disposition method determined.

## 2 RECORDS SEARCHES AND CONSULTATION

### 2.1 RECORDS SEARCH

On July 27, 2023, a records search for the APE and a 0.5-mile radius was conducted at the NWIC, at California State University, Sonoma (File no. 23-0009). The following information was reviewed:

- ▶ site records of previously recorded cultural resources,
- ▶ previous cultural studies,
- ▶ NRHP and CRHR listings,
- ▶ the California Historic Resources Inventory
- ▶ Built Environment Resource Directory for Humboldt County
- ▶ Historical Maps (USGS Topographic and GLO Plat maps)

The records search (Appendix A) identified two previously recorded historic era archaeological sites within the APE and 11 within a 0.5-mile radius. Both historic era archaeological resources were evaluated for the CRHR and NHRP in S-48353 and were recommended ineligible. The DPR forms do not include the evaluation. Table 2-1 lists the previously recorded resources inside the APE and Table 2-2 lists the previously recorded resources outside the APE, but within the 0.5-mile radius. The search also found that two previous investigations have occurred within the APE (Table 2-3), which together cover 100 percent of the APE. An additional 14 investigations have occurred within 0.5 mile (Table 2-4).

**Table 2-1 Resources Inside the APE**

Primary Number	Name	Age	Attribute Codes	Status
P-12-003608	Ruins of Van De Nor Lumber Mill	Historic era	AH02- foundation/structure pads	Recommended ineligible for CRHR/NRHP
P-12-003609	Arcata Spur of Humboldt Northern Railway	Historic era	AH07 - railroad grade	Recommended ineligible for CRHR/NRHP

## 2.2 OTHER SOURCES

Additional research included review of historic USGS Topographic maps and arials available on-line from Nationwide Environmental Title Research, LLC. Historic USGS topographic maps from 1933 to 2021 and aerial images from 1956 to 2020 were reviewed (NETR 2023). GLO plat maps were also reviewed (BLM 2023).

## 2.3 SCARED LANDS FILE

Ascent requested a search of the SLF from the NAHC on July 4, 2023. Negative results were returned on August 6, 2023.

Attached to the results was a list of Native American groups and individual to contact who may also have knowledge of cultural resources in the APE. A summary of that contact is included in Section 2.4.1 below. A copy of the NAHC response letter is included in Appendix B.

## 2.4 SECTION 106 CONSULTATION

### 2.4.1 Tribal Correspondence

As part of the Section 106 process and separate from AB 52 consultation, emails were sent to all groups and individuals provided by the NAHC on September 6, 2023. The email included project information, a project map, and contact information. Tribal coordination for this report was conducted as part of the background research effort. If no response was received to the initial contact, a follow-up request was sent on September 21, 2023. Additional correspondence and a new project location map was sent after the project footprint was expanded. Table 2-5 provides a summary of who was contacted, how, when, and the response, if any. Copies of the Tribal correspondence are included in Appendix B.

**Table 2-5 Native American Consultation by Ascent**

Name and Title	Affiliation	Date and Medium of Initial Contact	Date and Medium of Follow-up Contact	Response Summary
Josefina Frank, Chairwoman	Bear River Band of the Rohnerville Rancheria	September 6, 2023 Email	September 21, 2023 Email	No response to date.
Melane McCavour, Tribal Historic Preservation Officer	Bear River Band of the Rohnerville Rancheria	September 6, 2023 Email	September 21, 2023 Email	On September 21, 2023, Malanie McCavour responded they would like a copy of the cultural report. On July 21, 2024, a copy of the cultural report was emailed to the tribe.
Daniel Holsapple, Tribal Historic Preservation Officer	Blue Lake Rancheria	September 6, 2023 Email	September 21, 2023 Email	No response to date.
Jacob Pounds, Assistant Tribal Historic Preservation Officer	Blue Lake Rancheria	September 6, 2023 Email	September 21, 2023 Email	On September 25, 2023, Jacob Pounds responded that they do not have any knowledge of cultural resources in the APE.
Claudia Brundin, Chairperson	Blue Lake Rancheria	September 6, 2023 Email	September 21, 2023 Email	No response to date.
Garth Sundberg, Chairperson	Cher-Ae Heights Indian Community of the Trinidad Rancheria	September 6, 2023 Email	September 21, 2023 Email	No response to date.

Name and Title	Affiliation	Date and Medium of Initial Contact	Date and Medium of Follow-up Contact	Response Summary
Byron Nelson, Chairperson	Hoopa Valley Tribe	September 6, 2023 Email	September 21, 2023 Email	No response to date.
Keduescha Lara-Colegrove, THPO	Hoopa Valley Tribe	September 6, 2023 Email	September 21, 2023 Email	No response to date.
Ted Hernandez, Chairperson	Wiyot Tribe	September 6, 2023 Email	September 21, 2023 Email	No response to date.
Marnie Atkins, Tribal Secretary	Wiyot Tribe	September 6, 2023 Email	September 21, 2023 Email	No response to date.
Michelle Vassel, Tribal Administrator	Wiyot Tribe	September 6, 2023 Email	September 21, 2023 Email	On September 21, 2023, Michelle Vassel responded that the THPO, Ted Hernandez, was the most appropriate person to contact. Ted Hernandez was contacted as part of the Section 106 coordination (see above).

## 2.5 FIELD METHODS

An intensive pedestrian survey of the APE was conducted on September 4, 2023, by Ascent staff Roberto Mora, RPA. Parallel transects averaging approximately 15 meters apart were used throughout the APE. All open areas where the ground was visible were closely examined. Special attention was given to bare patches of ground, exposed soils, rodent burrows, and dirt piles. Previously recorded resources were photographed and updated on the appropriate California Department of Parks and Recreation (DPR) 523 forms (Appendix C).

The results of the surveys are detailed in Section 5.2.

### 3 ENVIRONMENTAL SETTING

The APE is located in Humboldt Bay region; today Humboldt Bay has been renamed Arcata Bay, but for consistency with prior research, the name Humboldt Bay will be used for this report. The predominant land use within the APE is industrial and residential, with additional residential development to the north, east, and south; US Highway 101 (US 101) and Cal Poly Humboldt University are located to the east. Prior to development, the Humboldt Bay region was a coastal plain with redwood forest around its perimeters and the APE was a grassland located in the McDaniel Slough floodplain (Ascent 2022: 15). The topography of the APE is relatively flat, with elevation averaging 30 feet above sea level. The McDaniel Slough bound the APE along the east, and the Mad River lies approximately 2.25 miles to the north and Humboldt Bay lies approximately 2.5 miles to the south. Climatically, the project is located in a cool-summer Mediterranean climate, dominated by marine influences associated with Humboldt Bay and the Pacific Ocean. Average annual precipitation is 40.16 inches, with the majority of that falling between October and April. The average maximum annual temperature is 58.6 degrees Fahrenheit and average minimum annual temperature is 46.7 degrees Fahrenheit (Ascent 2022:18).

Native vegetation species that were likely present prior to development includes species that have economic importance to past and living local indigenous peoples. These species include such trees and brush as red and white alder, California bay laurel, dogwood, various willow species, and elderberry. Grasses, flowering plants, ferns, and berries of importance which may have been present include elk clover, miners lettuce, coltsfoot, tobacco, California pitcher plant, chamomile, sword fern, woodwardia fern, salmonberry, thimbleberry, and California blackberry (Angeloff 2016: 39).

Important large mammal species which would have been present in and near the APE include Roosevelt elk, California black-tailed deer, North American beaver, as well as smaller mammals such as jackrabbits, cottontails, Humboldt's flying squirrel, and various waterfowl. Chinook and coho salmon, lamprey eels, steelhead, and other fish would have been found in local creeks (Angeloff 2016: 39). Freshwater mussels were available in local creeks and sloughs as well.

#### 3.1 GEOLOGY AND SOILS

Arcata is located within the Coast Ranges Geomorphic Province of California, which is characterized by subparallel north- to northwest-trending mountain ranges and intermountain and coastal alluvial valleys and plains. Topography in the province is controlled by the predominant geological structural trends within the Coast Range that generally consist of northwest trending synclines, anticlines, and faulted blocks (Geocon 2015: 2).

The APE is located approximately 2.5 miles north of Humboldt Bay and 1.5 miles north of Arcata Bay. The Humboldt Bay region is a complex geologic environment with very high seismicity containing many earthquake faults. The nearby Mendocino Triple Junction is the intersection of three continental plates, the North American, Pacific and Gorda plates. Offshore from Arcata, the Gorda plate is being actively subducted beneath the North American plate in the Cascadia subduction zone (Geocon 2015: 2). The geology of the APE is part of the Holocene epoch, Alluvium Quaternary (Qal) which are sediments that generally consist of quaternary age unconsolidated sediment deposited on active stream channels and floodplains, including clay, silt, sand, gravel, cobbles, boulders, and in some area's abundant organic material with thin peat beds.

The surficial soils on and in the vicinity of the APE are classified primarily as Arlynda, Dungan, and Jollygiant. The Arlynda series consists of very deep, very poorly drained soils on backswamps, depressions, meander scars, and low flood-plain steps on alluvial plains near the Pacific Ocean and along lower reaches of rivers and streams. These soils formed in alluvium derived from mixed sources. Slopes range from 0 to 9 percent. The Dungan series consists of very deep, well drained soils on high floodplain steps, alluvial fans, and fan remnants of alluvial plains. This series is formed in mixed alluvium. Slopes range from 0 to 2 percent. The Jollygiant series consists of very deep, somewhat poorly drained soils on low terraces, alluvial fans, and fan remnants on alluvial plains. This series is formed in mixed alluvium. Slopes range from 0 to 2 percent (UCD Soils Web 2023).

## 4 CULTURAL SETTING

### 4.1 NATIVE AMERICAN PRE-CONTACT SETTING

Evidence indicates that Native American occupation in the Humboldt Bay region began approximately 8,000 years ago. Although few comprehensive archaeological investigations and excavations have been completed in the region, three distinct cultural patterns, each with their own suite of artifacts and lifeways, have been identified. These patterns are the Borax Lake, Mendocino, and Tuluwat patterns.

#### 4.1.1 Borax Lake Pattern [8,000 to 5,000 cal before present (BP)]

During the Borax Lake Pattern, the climate was warmer and drier than today, and the oak woodland in northwestern California was more extensive. The material culture associated with the Borax Lake Pattern includes Borax Lake Widestem projectile points, handstones, millingslabs, small serrated bifaces, and cobble spalls (Angeloff 2016: 40).

Recent research has indicated that lifeways during the Borax Lake Pattern time period may have been less mobile and more sedentary than previously believed (Angeloff 2016: 40). Larger occupation areas appear to have been located in lowland riverine environments where large game such as elk and deer would have been easily obtainable. This habitat also would have allowed exploitation of migratory salmon runs. Seasonal occupations in upland areas to gather resources such as acorns would have complemented the lowland diet. Tool assemblages found in each of these habitats appear to support this hypothesis; specialized and expedient tools are more often found in the upland archaeological sites while a more broad and homogenous tool assemblage is present in lowland sites indicating a longer period of occupation there.

Archaeological sites associated with the Borax Lake Pattern have been documented on the ridgelines east of Humboldt Bay, such as Pine Ridge, and at a coastal terrace overlooking Little River, north of the APE (Rich 2016: 14).

#### 4.1.2 Mendocino Pattern (5,000 B.P to 2,500 BP)

During the Mendocino Pattern, upland areas of Humboldt Bay seem to have been virtually abandoned. This is likely due to a change in environment from a warm and dry middle Holocene to a cooler and wetter late Holocene which allowed coniferous forests to move down into the elevations where oak woodlands were present in the previous pattern (Angeloff 2016: 40).

Sites associated with this pattern generally include concave-base, side-notched, and corner-notched dart points; handstones and millingslabs; flake tools; and occasionally mortars and pestles (Angeloff 2016: 41). It appears that people were living intensively on the rivers of northern California during this period with only short-term forays into upland areas to bring resources back to the larger village site near the river below.

Archaeological sites associated with Mendocino Pattern assemblages have been located in the coastal hills adjacent to Humboldt Bay and at bay margin sites in Arcata (Rich 2016: 14).

#### 4.1.3 Tuluwat Pattern (2,500 BP to 500 BP)

The Tuluwat Pattern was formerly known as the Gunther Pattern and is named for the Wiyot Village of Tuluwat (CA-HUM-67) on Gunther Island in Humboldt Bay. Lifeways during the Tuluwat Pattern saw occupation centers move to the coast and more intensive use of both riverine and upland environments as well as coastal ones. This intensive use of multiple habitats is likely due to increased populations and constricted resource bases due to a return to warm and dry conditions in the late Holocene (Angeloff 2016: 42). Another theory is that Algic (also known as Ritwan) groups during the earlier part of this pattern (circa 2,300 years ago) and Athabaskan groups approximately 1,000 years later, migrated into the area, pushing the original inhabitants (the Yuki) southward (Angeloff 2016: 42; Golla 2007: 72-73).

Tuluwat Pattern artifact assemblages reflect a substantially more sedentary residential base with a broad array of artifacts such as toggle harpoons, net spacers, net weights, bowl and hopper mortars, shaped pestles, large bifaces, Tuluwat-Barbed arrow points, adze heads, calendar stones, *Olivella* beads, and abalone pendants (Angeloff 2016: 42).

The Tuluwat Pattern essentially represents the cultures inhabiting the Humboldt Bay area, including Arcata, at the time of European contact.

## 4.2 ETHNOGRAPHY

### 4.2.1 The Wiyot

The APE lies within the traditional territory of the Wiki division of the Wiyot Indian tribe. This group occupied lands adjacent to Humboldt Bay and refer to themselves as the *Soo-lah-te-luk* (Rich 2016: 14-15). The name "Wiyot" itself is derived from the Yurok term "*weyet*" or "*weyot*."

The Wiyot language, and the language of the Yurok to the north, are similar to Algonquin, and although the Wiyot and Yurok languages are distinctly different, they are distantly related. Linguists have linked the two into a provisional group called Ritwan, which is the California branch of Algic (Golla 2007: 72-73). Linguistic research implies that both the Wiyot and Yurok migrated into Northwestern California during a similar timeframe but went to different locations (Eidsness 2007: 11; also see Tuluwat Pattern discussion above).

Wiyot territory has been described as being bounded on the northwest by the valley of Little River near Trinidad and on the northeast by Berry Summit and Chalk Mountain. On the south, Wiyot territory extended to the Bear River mountains near Scotia. To the west, it was bounded by the Pacific Ocean. To the east, it included lands along Mad River for two or three miles above Blue Lake, and up Eel River for a mile or two above the mouth of the Van Duzen River (Elsasser 1978: 156; Wiyot Tribe 2023). This territory is almost entirely in the redwood belt of northwestern California.

Wiyot settlements were typically located next to areas of "still water" along the fringes of Humboldt Bay and on the terraces above the lower Mad and Eel Rivers (Eidsness 2007: 11). Wiyot houses were square and semi-subterranean with plank walls, a gabled roof, and sliding doors. Sweat houses were also semi-subterranean and at least 16 feet square. Wiyot peoples also made redwood dugout canoes. Clothing was mostly made from deer and rabbit skins. Women and girls wore twined basketry caps. Basket-making materials included spruce and willow roots, bear grass, maidenhair and woodwardia ferns, hazelnut, and a dye made from alder bark juice. Twined baskets were used for carrying and cooking foods (Rich 2016: 15).

Animals were hunted or caught in various ways. Elk were pursued by a hunter and his dogs in a running chase that could last as much as two days. Deer and sometimes elk were caught in rope snares. Bears were trapped in deadfalls, or, if hibernating in a hollow log, suffocated by smoke after the openings had been partially blocked. Waterfowl were hunted from blinds. Salmon might be taken in gill nets or in either of two types of fish weirs. Smelt were caught in surf nets (Rich 2016: 15). Acorns and huckleberries were two plant resources of prime importance (Elsasser 1978: 158).

## AFTER CONTACT

The first recorded "discovery" of Humboldt Bay by Europeans was in 1806 by Captain Jonathan Winship (Wiyot Tribe 2023). Sustained contact began in 1849 when Josiah Gregg journeyed overland to Humboldt Bay and were met by Wiyot headman *Ki-we-lat-tah*. This started Euromerican settlement in the region; however, it was the Gold Rush which resulted in the destruction of many Wiyot people and culture. The ensuing "Indian troubles" culminated in a series of massacres, most notably the infamous slaughter at *Tuluwat* on Gunther Island in Humboldt Bay on February 26, 1860. Here, the Wiyot people had gathered at their traditional site on the island for the annual World Renewal Ceremony, which lasted seven to ten days. At night, the men would replenish supplies, leaving the elders, women and children sleeping and resting. Under cover of darkness, local men armed with hatchets and knives rowed to the island and brutally murdered nearly all the sleeping Wiyot. Estimates of the dead ranged from 80 to 250 in that night's series of orchestrated massacres (Wiyot Tribe 2023).

Although the men involved were locally known, no charges were ever filed. Remaining Wiyot temporarily took refuge at Fort Humboldt, where nearly one half of the survivors died of exposure and starvation. Later these survivors were forcibly relocated to reservations at Klamath, then after a devastating flood in 1862, moved to Hoopa, Smith River, and Round Valley reservations. Some of the surviving Wiyot also attempted to return to their homeland, only to find their homes destroyed and lands taken by Euromerican settlers.

As the 19<sup>th</sup> and 20<sup>th</sup> centuries advanced, Wiyot cultural practices and language were discouraged by official policies of "acculturation." Wiyot people learned to work and live within the Euromerican community, effectively "walking in two worlds." Wiyot people often went to American schools, married European immigrants, and helped to build the timber, fishing, and agricultural industries (Wiyot Tribe 2023).

In the early 1900s, a church group purchased twenty acres in the Eel River estuary for homeless Wiyot people. The Federal Government later transferred this land into trust status in 1908. This land became known as the Table Bluff Rancheria of Wiyot Indians, now referred to as the "Old Reservation." The "Old Reservation" is located near Eureka.

## CONTEMPORARY WIYOT

In 1961, the California Rancheria Act terminated the legal status of the tribe, and the Wiyot effectively became non-Indian Indians. In 1975, the Tribe filed suit against the Federal Government for unlawful termination, and in 1981 federal recognition and trust status was reinstated as a result of Table Bluff Indians versus Lujan. In 1991, during another lawsuit regarding drinking water contamination and other sanitation issues on the "Old Reservation", the court mandated new land be purchased and the Tribe moved to the present 88-acre Table Bluff Reservation. The original twenty acres were put into fee simple ownership under individual families, but still are under the Tribe's jurisdiction as long as held in Indian hands. The two reservations are within one mile of each other. Other Wiyot reservations/rancherias include the Bear River Band of Rohnerville Rancheria near Loleta, Blue Lake Rancheria near the community of Blue Lake, and Cher-Ae Heights Indian Community of the Trinidad Rancheria near Trinidad.

Today, Wiyot people are actively recovering the old ways, including language, ceremony, and lifeways. At the same time, they acquire new trades and skills, graduate from college, become artists, doctors, lawyers, teachers, and professionals in a variety of fields. Many Wiyot tribes, such as the Wiyot Tribe at Table Bluff Rancheria, Blue Lake Rancheria, Bear River Band of the Rohnerville Rancheria, and Cher-Ae Heights Indian Community of the Trinidad Rancheria also maintain their own tribal court system as well as provide health, education, childcare, and advocacy services for tribal members. Wiyot people are dedicated to preserving native history and the cultural material of their ancestors. This includes the ancient village sites and shell middens that surround Humboldt Bay, terraces above the waterways, and along the ridge lines once used for seasonal camps, travel, and trade. Pieces of long forgotten native history are emerging as a result of both archaeological investigation and from family memories and records. Although much of Wiyot pre-contact history has been lost or destroyed, there is also much that is "coming home" (Wiyot Tribe 2023).

## 4.3 EUROMERICAN HISTORIC SETTING

### 4.3.1 Discovery and Settlement

Humboldt Bay, formerly called Arcata Bay, was first discovered in 1806 by Captain Jonathan Winship, an American employed by the Russian-American Fur Company when he was hunting seals and otters in the region (Hoover et al. 2002: 103). He and his crew named the bay "Indian Bay" because of the numerous indigenous villages they found along its shore. The bay was not addressed again by Euromericans until Dr. Josiah Gregg rediscovered the bay as part of his expedition to map the Trinity River.

Prompted by the 1848 discovery of gold on the upper Trinity River and 1849 rediscovery of Humboldt Bay, Euromerican immigrants rapidly claimed and settled the flatter areas of coastal land around Humboldt Bay. These locations, ideal for farming and ocean access led to the formation of the cities of Trinidad, Eureka, and Union; Union

was renamed Arcata in 1860 (Eidsness 2007: 12). First settled in the spring of 1850, Arcata was a supply center for the interior mining districts. The townsite at the foot of Fickle Hill was selected by the Union Company and was soon subdivided into blocks and lots for homes and businesses (City of Arcata 2008: 5-19). To supply the new town and provide easy transit from ocean going vessels, a wharf was constructed into Humboldt Bay. A horse-drawn railway was constructed between the wharf and downtown, where merchandising establishments supplied the miners and a growing number of settlers.

During this early period of Euromerican settlement, Wiyot peoples continued to occupy their ancestral lands around Humboldt Bay and along the Mad River. Increasing foreign exposure and settlement caused many Wiyots to be impacted by introduced diseases, displacement, starvation, and conflict (Eidsness 2007: 12-13).

As gold fever increased, tensions continued to rise between Euromerican miners, settlers, and local Tribes. To help resolve this, the U.S. Army established Fort Humboldt near Eureka in 1853 "to protect settlers from Native American raids." Soon after, other military posts were established in the Humboldt Bay region, including Camp Curtis near Arcata in 1858. Located approximately one-quarter mile north of the APE, Camp Curtis had a good view of the lower Mad River plain and agriculturally rich Arcata bottomlands (Eidsness 2007: 13). As noted above, relations between the Wiyot and settlers suffered a great blow in 1860 when 80 to 250 Wiyot individuals were slaughtered on Gunther Island during a Wiyot World Renewal Ceremony (Wiyot Tribe 2023).

## 4.3.2 Agriculture, Lumber, and Railroads

### AGRICULTURE

The first areas in the vicinity of Arcata to be settled by Euromericans were bottomlands adjacent to Humboldt Bay. Called the Arcata Bottom, these flat floodplains were free of the dense redwood forests which characterize the adjacent uplands, and therefore required far less effort to clear for farming. The agriculture of the Arcata Bottom was initially a grain-focused economy. Grains, such as oats, barley, wheat, and hay were planted, along with dry peas and potatoes (Angeloff 2016: 63). Cultivation of grain crops and potatoes lasted into the 1880s, when the potato blight and poor market returns prompted farmers to look at a new and emerging agricultural industry, dairying.

Dairying on the Arcata Bottom began to supplant the earlier agricultural pursuits as farmers realized that pasturing cows and milking them twice a day was a more lucrative business than grain crops that were plagued with disease and the vagaries of the weather and markets (Eidsness 2007: 13). The first dairy herds began to appear on the Bottom in the late 1880s, and within a few short years, the industry was booming enough for a creamery to be considered a profitable venture. The first creamery, the Arcata Creamery, was built in 1892, the second two years later, and several more followed in short succession, including the Diamond Crystal Creamery (Angeloff 2016: 63-64). As reclamation efforts of tide-influenced lands around the bay and along the sloughs got underway in the mid- 1890s, more land was made available for dairying, and the industry came to dominate the Arcata Bottom agriculture for the next 75 years (Eidsness 2007: 14). Stock raising, poultry farms, grain production for stock food, and flower bulb farms rounded out Arcata's ranching and farming activity (Rich 2016: 19).

### THE LUMBER INDUSTRY

Vast, virgin forests of giant redwoods covered the ridges and valleys along California's north coast, including the inlands around Humboldt Bay. At first, some of these trees provided lumber for gold miner's sluice boxes, tail races, and shacks. However, as the gold literally panned out and the miners turned to agriculture and similar industries, lumber was needed to construct the homes, businesses, and infrastructure needed for the new settlements of the region to grow. Lumber from the region was also used for shipbuilding on Humboldt Bay.

Arcata's first sawmill was the Union Mill, built in 1853. Other early Arcata Mills included the Janes Creek Mill, located north of Arcata in 1869, the Dolly Varden mill built in 1872 by Isaac Minor and Noah Falk, and the Jolly Giant Mill at the northern edge of Arcata, built by Minor and Falk in 1874/1875. The Dolly Varden Mill was located in the vicinity of

the St. Louis Road and Spear Avenue intersection, and the Jolly Giant Mill was located in the vicinity of Jolly Giant Creek, just north of today's Cal Poly Humboldt (Angeloff 2016: 68; Rich 2016: 19). In the 1870s, trees logged above Arcata were transported down Campbell Creek on skids still visible in the creek bed today.

By the end of the Great Depression in 1939, only four lumber companies had been able to remain in business. Known as the "Big Four," these companies were Dolbeer and Carson, Pacific Lumber, Hammond Lumber, and Holmes-Eureka. In Arcata, the California Barrel Company, which was founded in 1902, was also able to survive and became the major local employer after World War II (Angeloff 2016: 68).

The post-World War II housing boom multiplied the number of lumber mills in Arcata and the region. As early as February 1947 Arcata reported over 30 lumber operations, many of them in the area north of town along Highway 299. The increase relentlessly continued so that by 1956, there were over 50 lumber mills and lumber processing and manufacturing plants with access to "one of the largest remaining stands of timber in the United States" (Rich 2016: 20). For example, in 1953, lumber milled from these local timber sources resulted in a total of 28,371 railcar loads and thousands of truckloads from the Arcata area alone. Thus, it is no wonder that the city's slogan was "the lumber capital of the world" in 1965 (Rich 2016: 20).

Lumber mills in Arcata after World War II include the following (Angeloff 2016: 68):

- ▶ Arcata Redwood Mill (est. 1939), 100 employees
- ▶ Arcata Plywood Corp (est. 1949), 235 employees
- ▶ Dolly Varden Lumber Company (est. 1945), 100 employees
- ▶ Roddiscraft Inc. (est. 1949), 315 employees
- ▶ Simpson Redwood Company (est. 1948), 753 employees
- ▶ Arcata Redwood Company (est. 1951), 80 employees
- ▶ Durable Plywood Co. (est. 1950s), 190 employees

In time, though, the "lumber capital" saw its domain shrink. Today, less than a handful of mills still operate in the Arcata area, most being located along West End Road north of city limits (Rich 2016: 21).

## ARCATA MANUFACTURING COMPANY

Elmer Spaulding came to Humboldt County from Southern Oregon, where he had operated the Sugar Pine Lumber Company. Spaulding recognized what he described as the "unlimited opportunities offered by Humboldt County" and established the Arcata Manufacturing Company in 1947 where the Craftsman Mall sits today (Rich 2016: 25).

The Arcata Manufacturing Company plant processed sugar pine, Douglas fir, and white fir milled lumber into "sellable" ready-to-use lumber products (Rich 2016: 25). Waste from processing was burned on-site in large metal cylindrical structure called a teepee burner. This burner was located on west edge of the mill property. Larger burners could be up to ninety feet high and ninety feet in diameter, but this one appears to have been about 70 feet and was fed waste by vacuum conveyor tube. In 1957, Spaulding sold the plant to the Van Vleet Products Company. By 1964, Van Vleet faced significant financial problems and the plant was put up for auction. In 1965 the majority of the plant was demolished. All that remains today is one warehouse located on the northeastern edge of the property.

## RAILROADS

The first railroad in California was built in Arcata as a means to provide passage and goods for the Trinity River Gold Rush miners and the burgeoning settlements at and near Arcata. On December 15, 1854, the Union Plank Walk, Rail Track and Wharf Company was incorporated and shortly after, the railroad became operational in 1855 (San Bernardino History and Railroad Museum 2010). Starting on a pier which extended 11,000 feet into Humboldt Bay, the railroad used a horse drawn tram pulled over wooden track to provide hourly passenger and freight service directly

to downtown Arcata (Angeloff 2016: 57). In 1858, the railroad built a warehouse at the northeast corner of Block 159 in Arcata, now known as Jacoby's Building, which is recognized as California Historic Landmark No. 783. In 1875, the company bought its first steam locomotive and in 1881, the company became the Arcata & Mad River Railroad, providing service from the north end of Humboldt Bay to the north fork of Mad River (San Bernardino History and Railroad Museum 2010). The railroad remained in service for over 130 years transporting goods, timber, lumber, and people throughout the region until 1985 when truck transport was considered more economical.

An early railroad adjacent to the APE was the Eureka and Klamath River Railroad (E&KRRR). This grade was initially constructed by John Vance after he had constructed his mill at Samoa 1893. Vance began construction in 1896. The tracks ran from Vance's property near Essex, west along the north bank of the Mad River and south into Arcata. After passing by the current project location, the rail turned west toward Alliance, crossing the Arcata Mad River Railroad and continued to the Samoa peninsula, ending at the Vance Mill (Eidsness 2008: 29). In 1907, this line was absorbed into the Northwestern Pacific Railroad Company (NWPRR); creation of the NWPRR allowed the Santa Fe Railway and Southern Pacific Railroad to consolidate their competing northwestern California lines. Eventually, the NWPRR was connected to the San Francisco Bay Area via a main line which ran north from Marin County. Tracks of the NWPRR are located adjacent to the APE along the east margin of St. Louis Road and a spur also ran from the NWPRR tracks to the Arcata Manufacturing Plant. Analysis completed by William Rich in 2016 indicates that this 900-foot-long spur was used to transport cut lumber to and from the mill and was likely associated with the three warehouses on the south side of the mill property. This spur is no longer present, having been paved over and graded flat (Rich 2016: 31). After many years of struggle, the Federal Railroad Administration closed the entire NWPRR line in 1998, although the North Coast Railroad Authority retains control of the right of way.

### 4.3.3 The City of Arcata

Arcata, first known as Union, was settled in the spring of 1850 as a supply center for the interior mining districts. The townsite at the foot of Fickle Hill was selected by the Union Company and subdivided into blocks and lots. A wharf was soon constructed into Arcata Bay with a horse-drawn railway connecting to the Plaza downtown, where merchandising establishments supplied both the miners and growing numbers of residents (City of Arcata 2008: 5-19). A public water system and fire department came along in 1884, followed by the Arcata Union newspaper in 1886, electricity in 1895, railroad connections with San Francisco in 1914, the establishment of Humboldt State Normal School (now Cal Poly Humboldt) in 1914, and the Redwood Highway (US 101) in 1925 (City of Arcata 2008: 5-19).

The lumber industry sustained the development of Arcata through the 19th century and into the late 20<sup>th</sup> century. In particular, the timber industry was one of the City's main industries and employers after World War II (WWII). By the 1980s the timber industry was in severe decline. Today, Arcata has become a city with small incremental growth and where Cal Poly Humboldt, health providers, education facilities, small-scale manufacturing, agriculture, and retail trade are the primary employers (City of Arcata 2008: 1-6).

## 5 RESULTS

### 5.1 BACKGROUND RESEARCH AND CORRESPONDENCE RESULTS

The results of the NWIC records search found that two archaeological sites have been previously identified within the APE and that 100 percent of the APE has been previously surveyed for cultural resources. Both archaeological sites, P-12-003608 and P-12-003609, have been previously recorded and evaluated and recommended not eligible for both the CRHR and NRHP (Rich 2016).

Review of the 1855 GLO plat map, historic USGS topographic maps starting in 1933, and historic aerials starting in 1956, revealed that the APE was largely undeveloped during these years. The 1933 topographic map and the 1956 aerial revealed a railroad along the southern portion of the APE (recorded as P-12-003609). In addition, the 1972 aerial map and the 1953 topographic map revealed a structure close to the center of the APE. Furthermore, the 1974 topographic map and the 1972 aerial map depicted another structure within the APE. However, between 2005 (aerial map) and 2012 (topographic map) these two structures had been demolished, and only foundations remain (recorded as P-12-003608). The GLO plat map did not reveal any development within the APE.

### 5.2 PEDESTRIAN SURVEY RESULTS

The pedestrian survey was conducted on September 4, 2023, and found that the APE consists of portions that have been previously landscaped and very dense vegetation (blackberry bush). Ground visibility was mostly poor (0-25 percent) due the majority of the APE being covered in dense grasses, blackberry bushes, and built over landscape (Figure 5-1). Portions of the APE were intensively surveyed with transects spaced at intervals no greater than 15 meters apart. However, the majority of the APE could not be surveyed due to 7-8 feet high blackberry vines forming rows and walls. The total acreage surveyed was 7.1 (approximately 38 percent of the APE). During the pedestrian survey, all visible ground surface in the APE was carefully examined for cultural material (e.g., flaked stone tools, tool-making debris, stone milling tools, or fire-affected rock), soil discoloration that might indicate the presence of a cultural midden, soil depressions and features indicative of the former presence of structures or buildings (e.g., postholes, foundations), or historic-era debris (e.g., metal, glass, ceramics). Ground disturbances (e.g., animal burrows, embankments, graveled or dirt roads, etc.) were visually inspected.

The previously recorded resources (P-12-003608 and P-12-003609) were relocated and updated using DPR forms. No new cultural resources were encountered as a result of this survey. A digital camera was used to take photographs of the APE and a selection of these are provided in Figures 5-2 through 5-3.

#### P-12-003608

This archaeological site was named the "Ruins of Van De Nor Lumber Mill" which consists of concrete foundations. This historic era site was previously evaluated and recommended not eligible for the CRHR and NRHP (Rich 2016). This site was relocated during this (2023) survey effort, and it remains unchanged.

#### P-12-003609

This archaeological linear resource was named the "Arcata Spur of Humboldt Northern Railway" which consists of a railroad grade segment. This resource was previously evaluated and recommended not eligible for the CRHR and NRHP (Rich 2016). The railroad was relocated during this (2023) survey effort, and it remains unchanged.

## 5.3 POTENTIAL FOR BURIED ARCHAEOLOGICAL DEPOSITS

Based on geologic mapping by the United States Geological Survey (USGS), the majority of the site is underlain Quaternary-age aeolian deposits. The western margin of the site is mapped as Quaternary-age alluvium associated with the former McDaniel Slough. The soils conditions encountered in our recent subsurface explorations are generally consistent with the USGS mapping (Geocon 2015: 2). Soil survey maps indicate that there are three soil units present in the APE, the Arlynda, Jollygiant, and Dungan series. These soils range from poorly to well drained and are all very deep soils (UCD Soils Web 2023).

In 2011, a comprehensive geoarchaeological study was prepared for the California Department of Transportation, District 1, which includes Humboldt County (Caltrans 2011: 65). Landscape evolution and historic and modern development can impact the visibility of the archaeological record, but research has shown that archaeological sites tend to occur in specific geo-environmental settings (e.g., near reliable water sources and on stable land surfaces) rather than randomly throughout the landscape. For example, geoarchaeological studies have found that distance to water sources (e.g., stream, lake, spring) and landform slope (generally <18%) are two environmental variables that help accurately predict a location's potential to contain buried archaeological deposits.

The geotechnical analysis suggests that Arlynda, Jollygiant, and Dungan soils units are associated with the Latest Holocene time period. Such soil units consist of surface soils and landforms that developed between about 2,000 and 1,000 years ago and are dominated by nearly level alluvial fans and floodplains that are usually not dissected by erosion (Caltrans 2011: 93). This last fact corresponds to the fact that these three soils are typically found on relatively flat slopes (Ascent 2022: 16). The McDaniel Slough bound the APE along the east, and the Mad River lies approximately 2.25 miles to the north and Humboldt Bay lies approximately 2.5 miles to the south. Therefore, the APE is considered to have a moderate to high sensitivity for possible archaeological deposits. However, due to the amount of alluvial deposition (up to 12 feet) which is indicative of multiple episodes of flooding and the amount of disturbance from development, the possibility of these locations containing intact deposits is considered low.

## 6 CONCLUSIONS AND RECOMMENDATIONS

### 6.1 STUDY FINDINGS AND CONCLUSIONS

In accordance with Section 106 of the NHPA (36 CFR part 800) and CEQA (PRC Section 15064.5 and Section PRC 15126.4), the effects of the proposed Project within the APE have been assessed. A full accounting of all potential cultural resources located within the APE was achieved through a records search, literature review, Native American outreach, and field survey. Approximately 38 percent of the APE was surveyed due to dense blackberry vegetation. The intensive pedestrian surveys conducted for the current undertaking that occurred on September 4, 2023, considered both archaeological and architectural resources. The two previously recorded resources, P-12-003608 and P-12-003609, were recommended not eligible for inclusion in the NRHP and CRHR as they do not appear to meet any of the criteria necessary for listing in either register (Rich 2016). These resources are not associated with important events or people in history, are not architecturally distinguished, and are not likely to yield any additional important information about our history. As such, a finding of no historic properties affected is recommended under Section 106 and a finding of no impact to historical resources is recommended under CEQA.

### 6.2 RECOMMENDATIONS

Excavation, grading and construction activities in these areas could significantly impact archaeological resources, if present. Although they are not expected, in keeping with CEQA 15064.5(f) and Cal Poly Humboldt's request, measures to avoid significant impacts upon the inadvertent discovery archaeological resources, including the discovery of human remains, during implementation of ground disturbing project activities, the following measures are recommended to be added to the project:

- ▶ **Worker Awareness Training:** A cultural resources awareness training program will be provided to all construction personnel prior to the start of earth moving activities. This training will define what archaeological resources are, explain the relevant laws and policies protecting cultural resources, and what worker responsibilities are, should archaeological resources be encountered.
- ▶ **Inadvertent Discoveries:** If archaeological materials are inadvertently discovered during ground-disturbing activities, including midden soils, stone tools, chipped stone, baked clay, or concentrations of shell, bone, charcoal, glass, metal, or ceramics, all work shall cease within 100 feet (30.5 meters) of the find and the services of a professional archaeologist shall be retained immediately. At that time, Cal Poly Humboldt shall coordinate any necessary investigation of the site with the archaeologist as needed to evaluate the significance of the resource PRC Section 5024.1 and 21083.2 and provide proper management recommendations. If the resource is pre-contact in nature, consultation with affiliated Native American tribes may also be required. If the find is determined to be a unique archaeological resource per Section 21083.2(g) or a tribal cultural resource per Section 21074, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures and/or mitigation will be made available. Possible management recommendations for significant resources could include resource avoidance, reburial in a location nearby that will not be subject to ground disturbing actions, or data recovery excavation of the resource. The contractor shall implement any measures deemed necessary by the archeologist for the protection of archaeological resources and the Tribe for Tribal cultural resources developed in consultation with Cal Poly Humboldt. Do not resume work in the area of the discovery until directed to do so by the archaeologist.
- ▶ **Inadvertent Discovery of Human Remains:** If human remains are discovered during construction activities, work within 100 feet (30.5 meters) of the remains shall be stopped immediately, and the Humboldt County Coroner shall be notified, in accordance with Section 5097.98 of the PRC and Section 7050.5 of California's Health and Safety Code. The contractor will also notify the project proponent. If the remains are determined by the coroner to be Native American, the coroner will notify the NAHC within 24 hours, and the NAHC will designate a Most Likely Descendant (MLD). Together the land-owner and the MLD shall determine the ultimate treatment and disposition of the remains in accordance with PRC Section 5097.94.

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System (CHRIS).

Sincerely,

Justin Murazzo  
Researcher

### General notes

The maps with the report do not clearly show the areas that were included in the field survey. The authors felt that CA-HUM-10, 11, 12, & 13 were all part of a single resource. CA-HUM-515 was recorded within the project area during a later field study (S-2006, in 1980).

**Re: 19010021.15 CSU – Cal Poly Humboldt Parking Lot, Humboldt County**

Dear Mr. Mora:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: [Cameron.vela@nahc.ca.gov](mailto:Cameron.vela@nahc.ca.gov).

Sincerely,

*Cameron Vela*

Good morning,

This email is to follow-up on a request for information regarding the Cal Poly Humboldt Parking Lot Project sent to you on September 6, 2023. A map of the APE is attached again here for your reference.

The Native American Heritage Commission has identified you as someone who may have information concerning cultural resources of tribal concern which may be present in the APE. If you or the Tribe has any knowledge of such resources within the APE, and are willing to share their nature and location, please let me know. My contact information is provided below.

Thank you for your time and attention,

**Roberto Mora, RPA**

**Subject:** Cal Poly Humboldt Parking Lot - Section 106 Project Information letter

Greetings!

I am contacting you today as part of the cultural resources background investigation for the Cal Poly Humboldt Parking Lot Project located in Arcata, Humboldt County. Ascent has been retained to conduct a cultural resources technical study and this contact is concerning that effort. AB 52

consultation with the California State Polytechnic University, Humboldt is a separate effort that will be conducted by a representative of the University. This contact is for informational purposes to inform the cultural resources technical report, and to comply with 36 CFR 800.2 for Section 106 nexus (Army Corps of Engineers 404 permit).

### Project Description

The project would involve development of a long-term parking lot at 2000 Foster Avenue in Arcata to support Cal Poly Humboldt resident students. The APE is currently vacant and approximately 0.75-mile northwest of the main campus. The APE is located on the Arcata North 7.5' USGS Topographic Quadrangle at T 06N, R 01E, Section 29. A map of the APE location is attached to this email.

### Previous Investigations

A record search has been conducted at the Northwest Information Center and a pedestrian survey was completed on September 04, 2023. No indigenous archaeological resources have been previously identified within the APE and the survey was negative for the presence of indications of indigenous archaeological resources. The SLF search through the Native American Heritage Commission (NAHC) returned negative.

### Information Request

The NAHC has identified you as someone who may have information concerning cultural resources of tribal concern which may be present in the APE. If you have any knowledge of such resources within the APE, and are willing to share their nature and location, please let me know so I can include that information in the cultural report. Information provided regarding specific sites or Native American cultural resources will remain confidential. My contact information is provided below.

Thank you much for your time and attention,

Good morning,

This email is to follow-up on a request for information regarding the Cal Poly Humboldt Parking Lot Project sent to you on September 6, 2023. A map of the APE is attached again here for your

reference.

The Native American Heritage Commission has identified you as someone who may have information concerning cultural resources of tribal concern which may be present in the APE. If you or the Tribe has any knowledge of such resources within the APE, and are willing to share their nature and location, please let me know. My contact information is provided below.

Thank you for your time and attention,

### Roberto Mora, RPA

**Subject:** Cal Poly Humboldt Parking Lot - Section 106 Project Information letter

Greetings!

I am contacting you today as part of the cultural resources background investigation for the Cal Poly Humboldt Parking Lot Project located in Arcata, Humboldt County. Ascent has been retained to conduct a cultural resources technical study and this contact is concerning that effort. AB 52 consultation with the California State Polytechnic University, Humboldt is a separate effort that will be conducted by a representative of the University. This contact is for informational purposes to inform the cultural resources technical report, and to comply with 36 CFR 800.2 for Section 106 nexus (Army Corps of Engineers 404 permit).

#### Project Description

The project would involve development of a long-term parking lot at 2000 Foster Avenue in Arcata to support Cal Poly Humboldt resident students. The APE is currently vacant and approximately 0.75-mile northwest of the main campus. The APE is located on the Arcata North 7.5' USGS Topographic Quadrangle at T 06N, R 01E, Section 29. A map of the APE location is attached to this email.

#### Previous Investigations

A record search has been conducted at the Northwest Information Center and a pedestrian survey was completed on September 04, 2023. No indigenous archaeological resources have been previously identified within the APE and the survey was negative for the presence of indications of indigenous archaeological resources. The SLF search through the Native American Heritage Commission (NAHC) returned negative.

#### Information Request

The NAHC has identified you as someone who may have information concerning cultural resources of tribal concern which may be present in the APE. If you have any knowledge of such resources within the APE, and are willing to share their nature and location, please let me know so I can include that information in the cultural report. Information provided regarding specific sites or Native American cultural resources will remain confidential. My contact information is provided below.

Thank you much for your time and attention,
